
FalconFeather (Use for single or double side template)

Single side (printing with reverse images on the other side):
Design on side A or Side B template

Double side (printing with two different images on both sides):
Design on side A and side B template together

Image Setup

Place graphics and text inside the solid line.

All critical graphics/text SHOULD NOT EXCEED the dotted line. The area between the dotted and solid line is the bleed area. Anything outsided the dotted line may be trimmed off. All background graphics that fill the flag area should extend to the solid line. If desired, use the mask feature of your software to mask background image inside solid line.

Any placed raster (bitmap) graphics should be 100 to 150 dpi for best results. Exceeding 150 dpi is not necessary for this full size template.

When design is completed please convert text to oulines. Save the template as pdf or jpg.
